New Invention:

Using Albor High Pressure Laminate Machines we have created the thinnest wood kits on the market today. Compare for yourself with the pictures below. It is much more flexible meaning much easier installation, better adhesion to the dash, and lastly better looking. It is so much better looking then our competitors it is like day and night. When you install our competitors dash trim that small addition of thickness actually sticks out and looks like a sticker, because our is so much thinner it goes flush with the dash and looks like a factory replacement even though it is not. It does not stick out, and does not have the rough edges like our competitors. It is nice and smooth.
