Improvements

Website

- If a part number contains more than one car that is a part of an alias, the alias will show up in the drop down instead of the car model.
- On checkout of step 3 it will now show that "A charge from ~LegalCompanyName will be displayed on your credit card statement."
- On checkout a new field called "Customer PO#" has been added.
- Added Google XML Sitemap URL into Sitemap so other search engines can find it.
- Optimized the performance of the website.
- Redesigned Step 1 of Checkout for easier navigation.
- Step 2 of checkout will select the cheapest shipping option.

- Only if you insert your ID for Authorize.net or PayLeap will the certificate show up on the website.
- PayLeap certificate has been added to Shopping Cart and Checkout.
- If customer selects NET account from the website .. Billing Address is still required. Right now it just skips it. - Fixed
- Fixed the way coupon code is displayed on a product page.

Marketplace Module

- When you click set default options, next button will turn on immediately.
- Step 2 Clear list was renamed to Remove.

Emails Module

- Attachments have been completely re-designed and is not 100% secure for public internet.
- Signature will now support the enter key, allowing multiple lines for signature.

Order Tracking

- Order tracking now shows settled only orders
- If you want to check status for an order, this automatic email can be sent through order tracking.
 - "This order has been previously invoiced to you on ~invoicedate. We are checking status on it. If you have never received this order before we need it processed and shipped out as soon as possible. Make sure you do not enter this order as a duplicate order into your system. We will not be responsible for this particular order if you ship it out twice using the same Purchase Order Number."
~Invoice
- Will not show orders that have been shipped.
- Will show customer first name / last name.
- Order details are now defaulted when you click on an order.

Packing List

- Will disappear if item is shipped.
- Bar code printing now works.
- Packing list delayed numbers are showing up properly.
- When you move to, auto save will trigger.
- Renamed Done to Next

Product Setup Module

- Car Application Wizard: You can now open a new car with previous car values. The options will stay pre-filled if newly selected model has the same options.
- If you delete a part # the image associated to that part # doesn't get deleted and next time you create the same part # the old image comes up. - Fixed
- When you do price update - the cost can only be increased from cost .. not off jobber or MSRP
- Added more Alias Names for Cars for BMW and Mercedes-Benz
- Aces Updated 2010 Car Applications
- Added new options to car wizard:
 - No Heated Seats
 - Heated Seats
 - Single CD
 - 6 CD Changer
 - CD Changer
 - No Sunroof
 - Sunroof
- If you duplicate an image, the next image will have -1,2,3,4 in the alt name
- Image has no relationship to another duplicated image.
- Added Hidden / Offline in the product list.
- You can now check mark more than one product to do a price update.
- You can export any file in CSV format.

Order Assignment

- Now shows the auto assigned supplier next to each unassigned item.
- Fixed some issues with re-assigning orders to a different supplier.
- Added shortcut to jump the Customer module for that order.
- RENAME: Processed Only = Processed through Order Assignment
- Fixed some auto assign issues where some order would go back to assigned and not processed, after they are processed.
- Pending orders will not show up.
- If an order has not been charged, it will not assign.

Data Mapper

- Double spacing in a cell would cause an error - Fixed*
- Merge Tool: Price Application is required to have unique part numbers.
- Merge Tool: After merge, whatever did not merge can be exported.
- Merge Tool: Fields were case sensitive before. case sensitive is disabled.
- Merge Tool: Has check all button.
- Merge Tool: renamed Price Sheet and App Sheet.
- Assign category to product before creating now works.
- Fixed specifications to show up properly on creation of a product.
- Fixed several copy and paste issues.

- New feature - Deletes duplicates columns.
- Fixed the issue where two same car names with different years would get conflicted with each other.
- Fixed some exporting file issues.
- Universal product creation would not transfer part number and image. - Fixed
- Warning notes are now be saved.
- New feature to do ACES Validation and Error Validation in data mapper.
- Fixed some various parsing strings for ACES vehicles.
- New filter for bad records only.
- General image would not upload. - FIXED
- Anchor Text and Title switching during import, Product descriptions switching with Sub Title, etc. - FIXED.
- During merge some items would show \$1. - FIXED
- New validation if ACES is not valid or duplicates exist, you will not be able to proceed.

Customer Module

- If you charge for an order and then void the charge immediately. It will not allow you. If you cancel the order and void the charge, it will automatically de-attach the credit from the order, void the charge and zero out the store credit.
- Free Ground Shipping will only apply to domestic country. It will exclude Canada.
- In quote, Shopping List is automatically selected.
- If you try to get a UPS Rate or Process a shipment on a UPS holiday and error would occur. This has been fixed.
- On customer search list a discount level of each customer is displayed.
- You can now select multiple customers, right click and assign a discount level.
- When an order is charged and processed, a pop up will show up showing that it has been processed successfully.
- Changed the Order Legend to make it clearer on what order is processed, etc.

Price Control

- Spelling errors fixed.
- You can select multiple products, define a rule for multiple products and run the price control on all the products at once.
- If you run the price control and the first product is spidered, the second will start automatically.
- You can now remove and black list sellers from price control.

General

- You can disable Quick view from the website.
- New* - Credit Card phone # on checkout is can now be set to optional.
- Setting: Wholesale - Duplicate discounts work properly.

Themes

- Created themes for websites and tutorials are available as stated above.
- Display real classes in show details.
- Right clicking on value will give you various options of the class value.
- Border color can now be previewed.
- Image icon will show if it is an image.

Bug fixes

- Tracking Number would not be included in the tracking email. - Fixed
- Email percentages would not show up. - Fixed
- Created email with attachment and save as draft would cause an error on reopen. - Fixed
- If you have messages in the in basket and want to move them to a folder, you can right click on a message and get the Move To screen. However, you can click it, but unless you have highlighted the message first, it does not move. - Fixed
- Credit would sometimes not attach to a processed order. - Fixed
- Validate doesn't work if you go through brand filter. - Fixed
- Fixed Foreign Key problems in Product Setup during product upload. - Fixed
- If subtitle is too long an error would occur. - Fixed
- On the website if you choose an international shipping address an error would occur. - Fixed
- When you are logged in on the website and you process an order with NET / Store Credit. The available credit limit does not get refreshed after the order is placed. So as long as your logged in you can place as many orders as you want and the net credit will go over. - FIXED
- If I reassign 1 order while there is 8 more in that same supplier .. I get this error and all pervious orders disappear. - FIXED
- Delete wholesale discount and save get an error. - FIXED
