- Google Base: OPTIMIZING GOOGLE BASE LISTING TO GIVE YOU MORE RANKING CONTROL

ISSUES / BUGS THAT WERE FIXED

Customer Module

- When entering a credit card, first step the user must do is enter the type of credit card and the Credit card # before they proceed and it must validate. Once it is validated they can fill out the remaining information.
- Product Search when adding product... if you press enter trigger the search as default instead of select. Also when you expand the window ... make the search list expand not the part number / description frame
- In Shipsout have the shipping address default to manual
- Sometimes you try to delete an address which is linked to a credit card. Give a shortcut that will allow you to remap to another address of the credit card and delete the old address.
- Always select the first item in orders so the notes work.
- If you add a product and search for a specific part # that is found ... select it right away.

- When someone wants to pay net / store credit ... it ask them for billing info only .. but when they press continue it says CC is invalid
- Store credit redeem - should not take net ... should only use store credit. When I redeem net credit it said it will charge \$0 ... but then it charged the CC ... originally I said I am paying with CC not net
- If he doesn't have enough NET show him an error message "You do not have enough NET Credit Limit to settle this order."
- Shipping rules > US > ground is restricted for PR/ HI will no longer allow customer those customers to check out with ground
- Free Shipping to Canada was still charging shipping surcharges
- Flat rate shipping calculator will ignore if ignore if supplier has Canada live rate address
- If shipping address is different from billing, but drop ship form is on file do not mark it on hold.

Order Tracking

- Fixed mark picked up in shipsout
- Printer setting in shipsout was created
- Shipsout Mark it picked up was renamed to Customer Picked up
- Mark picked up is disabled if tracking number is entered

Website

- Search Results: Fixed issue with search results losing product images
- Homepage: If all main banner buttons are disabled it said FALSE
- Smartview is ignored on the website if user clicks on a different view

Order Assignment

- Fixed issues when invoices certain products it would give you an error
