- Customized RSS Website Feeds (as per tutorial)
- Third party RSS feed implementation
- Social Networking Integration with YouTube, Facebook, LinkedIn, etc.
- Price Control in Product Setup
- Completed optimization on Data Mapper
- Add Videos in Product Description

### **On Roadmap Highlights (January 31, 2009)**

- Complete Control of CSS and Styles of the website
- Wheels and Tires integration

### **New Tutorials**

- Tutorial 8.13
- Tutorial 0.5
- Tutorial 6.2
- Tutorial 6.2.1
- Price Control Tutorials

## **Improvements**

### **Website**

- Improved Cache performance
- Allow option through back office to Disable "Quick View"
- Yahoo Webmaster tool integration
- Clicktale.com Integration

### **Marketplace Module**

- Marketplace: added "Free Shipping" option and made the file export in "Single Output File."
- Put restrictions against entering categories in categories.
- You can now setup Amazon categories through product setup optional values.
- Froogle got a new button "Resubmit Feed"
- Step 2 - clear list ... rename to REMOVE

## **Emails Module**

- Emails are now driven from the database allowing SCE to increase email limits

## **Order Tracking**

- Renamed Invoiced Only to Processed Only

## **Packing List**

- You are now allowed to have multiple work flows per supplier.
- default the date range to 30 days list.

## **Product Setup Module**

- Completed Price Control.
- Added price update to "Upload To Server".
- New field for car application "Vehicle Description" (going above product description on the website).
- New shortcut (right click on car application) to Duplicate Part # or Change Part #.
- Allow to do free shipping on live rates.
- Exporting products allows you to set cost.
- Imported products now have anchor text as the title.
- Shortcut to mark products as featured, hidden etc. Through Product Setup (Right click on the products, and you can select multiple products).
- Allow to add additional description to each specific vehicle application that will go above the product description.
- Product Entry - Prefill discount has been fixed and will work similar to Price Update. If you change the pre-fill for one item all items will change the discount.

## **Order Assignment**

- Allow to assign to select multiple orders and assign to the same dealer. Custom order do not have a default supplier

## **Data Mapper**

- New tool to merge AAIA years
- New tool to merge 2 spread sheets together
- New tool to fix and fix known years and engines types
- Aces validation will consider the pattern of the model / sub model. So if model = sub model right after ... it will not enter it in models

## **Customer Module**

- NEW WORK FLOW: If order amount exceeds net credit limit, check if customer store credit will cover the net excess charge. If not then force the customer to apply a payment method in order to cover the difference between the net limit and the order amount. Then if store credit amount equals the excess charge from the net order. Settle the net order bypassing the credit limit and then settle the store credit against the excess of the credit limit.
- NEW WORK FLOW: If order is not settled when you try to put a tracking force it to settle against an authorization or allow to choose the payment method.
- NEW WORK FLOW: If all payment methods fail, allow manager approval to enter the tracking # regardless and the customer account will get the order placed under net account even though they might not have net available.
- NEW WORK FLOW: If account has negative balance and no credit limit, do not allow to settle orders unless the balance is paid off or credit limit is increased.
- NEW WORK FLOW: When you adjust a debit, force to display the adjusted amount and adjusted reason in the product list and in the invoice under the products of the invoice.
- Allow manager to overwrite shipping charge for the customer regardless if it flat or live and after it's overwritten it will become flat rate overwritten.
- New Filters in Order Search
  - Invoice # | PO # that is Due(\$)
  - Invoice # | PO # Past Due #(\$)
  - Invoice # | PO # Paid #(\$)
- New B2B Fields were entered for Customers > Wholesale section
- When you are about to process an order, pre-fill the credit card charge amount with the amount needed to settle the order.
- In new order search, deleted search by part # since the search by description does both.
- If you delete customer it sends out a rejection email ... can you ask if owner wants it to send them a rejection email or not.
- When you place a new order only show categories that have live / active products
- Added time to the date on order history list.
- When you process an order it will display a popup box acknowledged that it was processed.
- Allow to select multiple customers, right click and assign a discount level to them.

### **General**

- Shopping Cart Elite can now trace bandwidth usage from the back office and website.
- Cleaners have been created that will recycle deleted products and unused hard drive space.

### **Bug fixes**

- Fixed homepage products disappearing.

- Fixed wrong email templates used during registration.
- Fixed Checkout Step 2 – recalculate shipping not working.
- Fixed Price Pre-fill in Product setup not working properly.
- Debits | Charges if you minimize the screen to the left reset button overlaps refresh.
- When you edit an item from a customer list it doesn't give you a full description.
- Fixed New Quote in customers, it would not work.
- Put extra validation in customer to never have an order processed without a debit.
- After adding a new card through process order screen it didn't refresh so I couldn't charge it without exiting and coming into that screen again.
- Fixed - If you charge \$100 cash and try to refund more than \$100 it allows you to do that.
- Fixed - If you give refund cash transaction those amounts go to authorizations for some reason.
- Fixed - After processing a net order, from debits | charges > debits I press on view order it doesn't open it.
- Fixed PDF invoices.
- Hidden products are now showing up in category search.
- Fixed – Importing products sometimes goes to the wrong category.
- Submission URL does not appear after saving and reopening link.
- Allow 0% off jobber for Wholesale Settings.
- Fixed – UPS holidays shipping schedule would forbid website checkout on certain days.
- Marketplace set default options ... the next button doesn't turn on until you click it.
- Data Mapper: Warning notes are not being saved when creating a product. I assume it is because you call one. Vehicle Warning Note and in products you call it Car Warning Note
- Data Mapper: step 2 ... is picking up the wrong Chrysler 300 from the models and is not letting you pass to the next step ... pre-fill correctly.
- Customers: Fixed NET Credit Limits from the website ordering system.
